Milesight

Ultra ToF People Counter VS135-P

User Guide

Safety Precautions

Milesight

Milesight will not shoulder responsibility for any loss or damage resulting from not following the instructions of this operating guide.

- Though the device is compliant with Class 1 (IEC/EN 60825-1:2014), please DO NOT look at the ToF sensor too close and directly.
- The device must not be disassembled or remodeled in any way.
- To avoid risk of fire and electric shock, do keep the product away from rain and moisture before installation.
- Do not place the device where the temperature is below/above the operating range.
- ***** Do not touch the device directly to avoid the scalds when the device is running.
- The device must never be subjected to shocks or impacts.
- Make sure the device is firmly fixed when installing.
- Do not expose the device to where laser beam equipment is used.
- Use a soft, dry cloth to clean the lens of the device.

Declaration of Conformity

VS135-P is in conformity with the essential requirements and other relevant provisions of the CE,

FCC, and RoHS.

1. Product Introduction

1.1 Overview

VS135-P is a high-end people counting sensor that is based on deep learning AI and second-generation ToF technology. It is capable of adapting to various complex scenarios while ensuring excellent privacy protection. This sensor possesses an impressive accuracy of up to 99.8% in people counting, fully meeting your needs, and it delivers exceptional performance for both indoor and outdoor applications. With high ceiling mounting of up to 6.5m and an IP65 waterproof rating, it adapts seamlessly to any environment.

1.2 Key Features

- Up to 99.8% accuracy with the 2nd generation ToF technology and AI algorithm.
- Allow to collect more accurate people counting data by differentiating children / adults and detecting staffs via identification like staff lanyards for clearer people analysis.
- Support Multi-Device Stitching which enables the fusion of multiple devices, allowing for up to four-device stitching to expand coverage.
- Support queuing management via dwell time detection and regional people counting.
- Support advanced Heat Map function which provides deeper insights by visually representing the distribution and intensity of foot traffic.
- With radar sensor based ESG friendly working mode, it allows to experience full-speed operation when occupied while switching to a power-saving sleep mode when unoccupied.
- By incorporating 3-axis sensors for automatic height calibration, it ensures enhanced precision and guarantees accurate data analysis.
- Working well even in low-light or completely dark environments with great lighting adaptability
- Free from privacy concerns without image capturing.
- Automatically detect the optimal installation height, facilitating fast deployment and intelligent detection.
- High compatibility of data transmission via Ethernet port (HTTP/MQTT/CGI).
- Support local data storage and data retransmission to collect data securely.
- Quick and easy management with Milesight DeviceHub and Milesight Development Platform.
- Equip with Alarm I/O.

2. Hardware Introduction

2.1 Packing List

Milesight

If any of the above items is missing or damaged, please contact your sales representative.

2.2 Hardware Overview

Milesight

3. Power Supply

•

VS135-P can be powered by DC and 802.3at PoE+. Choose one of the following methods to power up the device.

Powered by DC Power Adapter (12V, 2A) DD 00 Power Adapter Powered by PoE Switch (802.3at standard) PoE Switch

Ethernet Cable

Powered by PoE Injector (802.3at standard)

4. Access the Sensor

VS135-P provides user-friendly web GUI for configuration access via Wi-Fi or Ethernet port. Users need to customize the password when using the device for the first time. The default settings are as below:

Wi-Fi SSID: People Counter_xxxxxx (can be found on the device label)

Wi-Fi IP: 192.168.1.1

Ethernet IP: 192.168.5.220

Here are 2 ways of accessing the web GUI:

• Wireless Method:

Step 1: Enable the Wireless Network Connection on your computer, search

for corresponding Wi-Fi SSID to connect it, then type 192.168.1.1 to access the web GUI.

Step 2: Select the language.

Step 3: Users need to set the password and three security questions when using the sensor for the first time (three questions can be skipped by refreshing webpage). After configuration, log in with username (admin) and custom password.

• Wired Method:

Step 1: Power on the device and connect the Ethernet port to a PC.

Step 2: Change the IP address of computer to 192.168.5.0 segment as below:

a. Go to Start → Control Panel → Network and Internet → Network and Sharing Center →
 Ethernet → Properties → Internet Protocol Version 4 (TCP/IPv4).

8

b. Enter an IP address that in the same segment with sensor (e.g. 192.168.5.61, but please note that this IP address shall not conflict with the IP address on the existed network).

| eneral | |
|---|--|
| You can get IP settings assigned this capability. Otherwise, you n for the appropriate IP settings. | l automatically if your network supports leed to ask your network administrator |
| • Use the following IP addres | 55: |
| IP address: | 192.168.5.61 |
| Subnet mask: | 255 . 255 . 255 . 0 |
| Default gateway: | 192 . 168 . 5 . 220 |
| | automatically |
| Preferred DNS server: | 8 . 8 . 8 . 8 |
| Alternate DNS server: | |
| 🗌 Validate settings upon exit | Ad <u>v</u> anced |

Step 3: Open the Browser and type 192.168.5.220 to access the web GUI.

Step 4: Select the language.

Step 5: Users need to set the password and three security questions when using the sensor for the first time (three questions can be skipped by refreshing webpage). After configuration, log in with username (admin) and the custom password.

Note:

- 1) Password must be 8 to 16 characters long and should contains at least two kinds or more in combination with numbers, lowercase letters, uppercase letters and special characters.
- You can click the "forgot password" in login page to reset the password by answering three security questions when you forget the password if you set the security questions in advance.

| 💄 admin 🔸 | NOGE2 (C* Bind Node2 | | |

VS135-P supports 3 working modes:

Standalone Mode: works as a standalone device to count people.

Master Mode: works as a master device to receive live view and tracks from other node devices. One master device can connect 3 node devices at most.

Node Mode: works as a node device to forward live view and tracks to the master device.

5.2.1 Basic Counting Settings

Draw Detection Lines

Users can draw detection lines to record the people count values which indicate the number of people enter or exit.

Step 1: Click Draw Detection Lines.

Step 2: Left-click to start drawing and drag the mouse to draw a line, left-click again to continue drawing a different direction edge, and right-click the mouse to complete the drawing. The line can be dragged to adjust the location and length. One device supports at most 4 broken lines with maximum 4 segments each.

Step3: If users need to delete the line, click **Draw Detection Lines** and select the line which need to be deleted, then click **Clear This Line** or click **Clear All**.

Note:

Milesight

 The arrow direction of the detection line depends on your drawing direction. If users need to flip the line, select the line which need to be flipped and click Flip Arrow Direction. And users can click Flip All to flip all detection lines.

- 2) Ensure that the detected target can pass through the detection line completely. It's recommended that the detection line is perpendicular to the In/Out direction and on the center of the detection area without other objects around.
- 3) Redundant identification spaces are needed on both sides of the detection line for the target detection. It ensures the stable recognition and tracking of the target before passing the detection line, which will make the detection and count more accurate.

Deployment Parameters

| Milesight Dashboard Rule Communication Report Validation System | I Working Mode Vorking Mode I Deployment Parameters Installation Height mm(2003-2000) Min. Target Height mm(2003-2000) Min. Target Height 100 Min. Target Height 1500 Min. Target Height 1600 Min. Target Height 1500 Min. Target Height 1600 Min. Target Height 100 Min. Target Height <td< th=""></td<> | | |
|---|--|--|--|
| Parameters | Description | | |
| Installation Height | Set the device installation height. Click Detect to detect the current installation height automatically. Note: Ensure that there is no object directly below the device avoiding interfering the height detection. The automatic detection of the installation height is not supported with dark floor/carpet (black, grey, etc.) | | |
| Max Target Height | Set the maximum target height, then the device will ignore the objects higher than this setting value. | | |
| Min Target Height | arget Height Set the minimum target height, then the device will ignore the object shorter than this setting value. | | |
| Child Filter Height | Set the max child height when children distinction feature is enabled. | | |
| Fully Loaded Cart Height | Set fully loaded cart height when shopping cart fill level detection is enabled. The device will count the shopping cart as full when it detects the object inside the shopping cart higher than this height. | | |
| Empty Cart Height | Set empty cart height when shopping cart fill level detection is enabled. The device will count the shopping cart as empty when it detects the object inside the shopping cart shorter than this height. | | |

Note:

Due to the error in ToF distance measurement (0.035 m), the Max. Target Height should be set as maximum pedestrian height plus 0.035 m and the Min. Target Height as minimal pedestrian height minus 0.035 m in the actual applications. For example, if the pedestrian height is 1.6 m to 1.8 m, the Max. and Min. Target Height should be configured as 1.835 m and 1.565 m respectively.

Counting Strategy

| Parameters | Description |
|----------------------------|--|
| Tracking Mode | Select the tracking mode of counting, including Heads Tracking and Feet Tracking. Note: Only Feet Tracking is supported when the working mode is multi-device stitching. It is recommended to use heads tracking mode when the installation height is low in standalone working mode. |
| Enhanced Detection Mode | Turn on when the depth image is abnormal, it will ensure normal counting and detecting. |
| U-turns Filtering | When enabled, it allows to draw an area for every line and the device will count the In and Out values only when people passed this area. Users can left-click to start the drawing and add edges for this area, then right-click to stop drawing. |
| Children Distinction | The device will detect the people shorter than child filter height as children. |

| Installation Height | 3101 | Detert |
|---|----------------|---------------|
| mm(20003500) | 5151 | Dences |
| Max. Target Height mm(500~3000) | 2000 | |
| Min. Target Height mm(500~3000) | 500 | |
| Child Filter Height mm(500-3000) | 1300 | |
| | | |
| Counting Strategy | | × ✓ |
| I Counting Strategy Tracking Mode ① | Heads Tracking | Feet Tracking |
| I Counting Strategy Tracking Mode () U-turn Filtering | Heads Tracking | Feet Tracking |

| Staff Detection | The device will detect the people who wear reflective stripes as staff tags on the visible parts (neck, shoulders, etc.) as staffs. Reflective stripe requirements: width > 2cm, about 500 cd/lux.m ² |
|---------------------------------------|---|
| Group Counting | Click to enable the group counting function that based on the distance, moving direction and speed difference to gain deeper insights into customer' behaviors. Note: This function is only applicable for line cross people counting. |
| Shopping Cart Fill Level Detection | The device will count the carts of different status according to the preset shopping cart heights. Note: 1) Line cross counting and region people counting will include cart counting if this option is enabled. 2) The shopping carts will not trigger the device to send trigger reports immediately, but the device will only send trigger reports when people pass through. |
| Region Monitoring | Click "+Add" to add the region monitoring. Up to 4 regions are supported with maximum 10 segments each. Step 1: Draw the region monitoring areas on the screen. |

Heat Map

Step 2: You can customize the zone name. And click to enable Region People Counting and Dwell Time Detection as needed. Pass-by Filtering can be set to improve statistical accuracy and Min.Dwell Time can be set to improve statistical validity.

| Advanced Properties | 5 |
|--------------------------------|---------|
| Zone Name | Region1 |
| Region People Counting | |
| Pass-by Filtering s(0~3600) | 5 |
| Dwell Time Detection | |
| Min. Dwell Time | 5 |
| | × ✓ |

Step 3: The configuration is displayed in the list after the configuration is complete. You can redraw the areas by clicking the redraw button in the list. Click the edit button to modify the advanced settings of the areas or click delete button to delete the areas separately.

| No. | Region Name | Advanced Properties | Operation |
|------|-------------|----------------------------|-----------|
| No.1 | Region1 | Region People Counting(5s) | |

Click to enable Heat Map function. Heat Map function can analyze person movement to reveal insights for better business management with the intuitive and accurate statistical analysis results in time or space pattern as needed.

Support Motion Heat Map and Dwell Heat Map. The motion heat map shows where the most people flow. And the dwell heat map shows the areas where people stay for the longest time.

17

| | Enable to periodically reset cumulative count on schedule. |
|-------------------|--|
| Reset Cumulative | Cumulative Count includes: |
| Count on Schedule | Total In/Out counting of each detection line. |
| | Max./Avg. Dwell Time of each detection region. |

I/O Settings

Milesight

| Parameters | Description |
|---|---|
| Input Enable Line Crossing Count Externally | Only when trigger status is the same as the current status, will the device count the data. Low Status=two contacts disconnected High Status=two contacts closure |
| Trigger Digital Output | When trigger event is enabled, the digital output will send a preset width of high level. Synchronized Pulse Interval: the interval between multiple pulses when several people pass through or multiple events trigger at the same time |

5.2.2 Multi-Device Stitching

Multi-device stitching is mainly used to monitor a larger detection area than just the area covered by a single device. When using this feature, devices should be installed next to each other and ensure the **detection areas** tangent or overlapping. It only uses one master device to output total counting data.

Note:

- 1) Multi-Device Stitching cannot be performed between standard versions and high ceiling mount versions.
- 2) Multi-Device Stitching cannot be performed between VS133-P models and VS135-P models.

18

Before using this feature, set one device as Master Mode and other devices as Node Mode.

Note:

1) Ensure the head of one person can be seen on both live views at the same time.

2) The devices can also be installed without overlapping as required.

Device Positioning

Milesight

Device positioning is done via X&Y coordinates. For example, the installation direction of the master device is shown as below. When the master device's coordinate is (0, 0), the coordinates of the node devices are all positive values.

Add Node Devices

Step 1: Go to the master device web GUI, then click Bind Node on Multi-Device List.

Manual: You can add a node device by the IP address, HTTP Port, Username or Password.

Note: Please ensure that the device you want to add is on the same local network as the master device and has low latency.

Auto: The device will use multicast protocol to search for the unbound node devices under the same local network.

| Channel | Select the wireless channel. Auto, 1,11 are optional. |
| Security Mode | No Encryption, WPA-PSK, WPA2-PSK and WPA-PSK/WPA2-PSK are optional. |
| Cipher | AES, TKIP, AES/TKIP are optional. |
| Wi-Fi Password | Customize the password when security mode is not No Encryption. |

802.1x Protocol

Milesight

The IEEE 802.1x is an authentication protocol to allow access to networks with the use of RADIUS server.

| Authentication Type | MD5-Challenge | $\hat{}$ |
|------------------------|---------------|----------|
| Enable | | |
| EAPOL Protocol Version | 802.1x-2001 | \$ \$ |
| Username | | |
| Password | | |
| Confirm Password | | |

| Parameters | Description | | |
|------------------------|---|--|--|
| Authentication Type | It's fixed as MD5-Challenge. | | |
| Enable | Enable or disable 802.1x authentication. | | |
| EAPOL Protocol Version | 802.1x-2001 or 802.1x-2004 is optional. | | |
| Username | Set the username for 802.1x authentication. | | |

| Password | Set the password for 802.1x authentication. |
|------------------|---|
| Confirm Password | Enter the password again. |

5.3.2 Recipient

Milesight

VS135-P supports to add data receivers (supports HTTP(s)/MQTT(s)). The device will proactively push data to the receivers according to the configured reporting scheme. Besides, users can get the people counting data or configure the device via CGI. For CGI document, please contact Milesight IoT support: iot.support@milesight.com.

5.4 Report

VS135-P supports visual line chart or bar chart generation to display people traffic and supports report exporting. Before using this feature, do ensure that the device time is correct on **System** page.

Note: When working mode is on Node mode, the device will not generate this report.

| Milesight | Event Line Crossing Counting Region People Counting Dwell Time Detection Heat Map |
|---------------|---|
| di Dashboard | Time Unit Hour Day Month Time Range 📀 24/03/2024 14:00:00 - 25/03/2024 14:00:00 Line1 🗘 |

| Recording Mode | Record Now Setting Time |
| Start Time | © 24/04/2024 22:09:36.000 |
| Duration min(1~240) | 60 |
| Video Quality | Standard Low Quality |

×

| Parameters | Description |
|----------------|---|
| Task Name | Customize a name for this task. |
| Recording Mode | Record Now or Setting Time is optional. |
| Start Time | Set the start recording time. |
| Duration | Set the duration of the recording, the duration of all tasks should not be more than 240 minutes. |
| Video Quality | When video quality is low, the video size will be smaller and quicker to download. |

Note:

- The setting time range of different tasks can not be overlap.
- Detection rules and ToF frequency parameters cannot be modified during the recording process.
- Recording tasks can only be performed on the master device when using the multi-device stitching function.
- If the validation videos need to be played locally, please contact Milesight IoT support for a specialized player.

Note: The playback progress bar of video stream footage highlights the video frame where the data changes.

5.6.4 Remote Management

Milesight provides remote management service for this device via Milesight DeviceHub platform or Milesight Development Platform. Before connecting, do ensure the device is connected to the network via Ethernet port and Internet connection is stable.

| Parameters | Description |
|------------|--|
| Frequency | Adjust the ToF frequency modulation mode to avoid the interference of surrounding IR devices. When using Multi-Device Stitching, please avoid using |
| Adjustment | the same mode with other node devices. Note: If there is only one option, please contact Milesight IoT support: iot.support@milesight.com |

Adjust the ToF light mode as Always On, Auto or Schedule. When using Auto mode, the device will turn off the ToF light when radar detects no person for some times to save the power.

Note:

1) ToF light off will not affect the periodic report.

2) When the device is working under master mode, it will also sync the ToF lighting mode settings with Node devices. And users can also configure this mode on the webpage of every node devices.

3) During validation, the ToF lighting will be fixed as On irregardless of its lighting mode configuration.

ToF Lighting Mode

Milesight

4) When using ToF Lighting Mode, the Dashboard will display relevant information.

| ToF Noise Filtering | Filter the noisy point on the screen when working with dark floor or carpet. |
|--|--|
| Noise Filtering Level | Standard Version: When installing in a spacious environment with black carpet, it is recommended to set the strength to 2; when installing in a narrow environment with black carpet, it is recommended to set the strength to 10. High Ceiling Mount Version: When installing in a spacious environment with black carpet: it is recommended to set the strength to 18; when installing in a narrow environment with black carpet, it is recommended to set the strength to 9. |
| Tilt | Enable to automatic compensation of person height values when the device is |
| Correction | mounted at a tilt. |
| | |
| Reset | Recovery device basic configuration: keep the IP settings and user information when resetting. Recovery device to factory settings: reset device to factory default, which needs to verify admin password. |
| Reset Reboot | Recovery device basic configuration: keep the IP settings and user information when resetting. Recovery device to factory settings: reset device to factory default, which needs to verify admin password. Restart the device immediately. |
| Reset Reboot Upgrade | Recovery device basic configuration: keep the IP settings and user information when resetting. Recovery device to factory settings: reset device to factory default, which needs to verify admin password. Restart the device immediately. Click the folder icon and select the upgrading file, then click the Upgrade button to upgrade. The update will be done when the system reboots successfully. Note: The upgrade process takes about 1-10 minutes. Do not turn off the power and complete automatic restart after the upgrade. |
| Reset Reboot Upgrade Backup and | Recovery device basic configuration: keep the IP settings and user information when resetting. Recovery device to factory settings: reset device to factory default, which needs to verify admin password. Restart the device immediately. Click the folder icon and select the upgrading file, then click the Upgrade button to upgrade. The update will be done when the system reboots successfully. Note: The upgrade process takes about 1-10 minutes. Do not turn off the power and complete automatic restart after the upgrade. Export Config File: Export configuration file. |

Import button to import configuration file.

6. Installation Instruction

Parameter definition:

Milesight

| Parameters | Explanation | Value |
|------------------|---------------------------------------|--|
| н | Installation height | Standard Version: ≤3.5 m High Ceiling Mount: ≤6.5 m |
| d | Minimum detection distance of VS135-P | Standard Version: 0.5 m High Ceiling Mount: 2 m |
| Δd | Distance measurement error of VS135-P | 0.035 m |
| h _{max} | Maximum pedestrian height | Example 1.8 m |
| h _{min} | Minimum pedestrian height | Example 1.7 m |
| α | ToF horizontal field of view angle | Standard Version: 98° High Ceiling Mount: 60° |
| β | ToF vertical field of view angle | Standard Version: 80° High Ceiling Mount: 45° |
| x | Length of detection range | |
| у | Width of detection range | |

6.1 Installation Height

- The maximum installation height is 3.5m and the minimum installation height is $hmax+d+\Delta d$. For example, when the maximum pedestrian height is 1.8m, then the minimum installation height is 1.8+0.5+0.035=2.335m.
- The maximum installation height is 6.5m and the minimum installation height is $hmax+d+\Delta d$. For example, when the maximum pedestrian height is 1.8m, then the minimum installation height is 1.8+2+0.035=3.835m.

6.2 Covered Detection Area

The detection area covered by the device is related to the field of view angle of the device, the installation height and the target height. The length of the detection area is approximately $x=1.155\times(H-h_{min})$ and the width of the detection area is approximately $y=0.828 \times (H-h_{min})$.

For example, if the Minimum height of pedestrians is 1.7 m, the detection area corresponding to each installation height is as follows:

Milesight

| Installation Height (m) | Monitored Area (m) | Detection Area(m) |
|-------------------------|--------------------|-------------------|
| 2.5 | 5.75 × 4.20 | 1.84 × 1.34 |
| 2.6 | 5.98 × 4.36 | 2.07 × 1.51 |
| 2.7 | 6.21 × 4.53 | 2.30 × 1.68 |
| 2.8 | 6.44 × 4.70 | 2.53 × 1.85 |
| 2.9 | 6.67 × 4.87 | 2.76 × 2.01 |
| 3.0 | 6.90 × 5.03 | 2.99 × 2.18 |
| 3.1 | 7.13 × 5.20 | 3.22 × 2.35 |
| 3.2 | 7.36 × 5.37 | 3.45 × 2.52 |
| 3.3 | 7.59 × 5.54 | 3.68 × 2.69 |
| 3.4 | 7.82 × 5.71 | 3.91 × 2.85 |
| 3.5 | 8.05 × 5.87 | 4.14 × 3.02 |

High Ceiling Mount Version:

| Installation Height (m) | Monitored Area (m) | Detection Area(m) |
|-------------------------|--------------------|-------------------|
| 3.5 | 4.04 x 2.90 | 2.08 x 1.49 |
| 3.7 | 4.27 x 3.07 | 2.31 x 1.66 |
| 3.9 | 4.50 x 3.23 | 2.54 x 1.82 |
| 4.1 | 4.73 x 3.40 | 2.77 x 1.99 |
| 4.3 | 4.97 x 3.56 | 3.00 x 2.15 |
| 4.5 | 5.20 x 3.73 | 3.23 x 2.32 |
| 4.7 | 5.43 x 3.89 | 3.46 x 2.49 |
| 4.9 | 5.66 x 4.06 | 3.70x 2.65 |

| 5.1 | 5.89 x 4.22 | 3.93 x 2.82 |
|-----|-------------|-------------|
| 5.3 | 6.12 x 4.39 | 4.16 x 2.98 |
| 5.5 | 6.35 x 4.56 | 4.39 x 3.15 |
| 5.7 | 6.35 x 4.72 | 4.62 x 3.31 |
| 5.9 | 6.81 x 4.89 | 4.85 x 3.48 |
| 6.1 | 7.04 x 5.05 | 5.08 x 3.65 |
| 6.3 | 7.27 x 5.22 | 5.31 x 3.81 |
| 6.5 | 7.51 x 5.38 | 5.54 x 3.98 |

6.3 Environment Requirements

 Dark floor/carpet (black, grey, etc.) will affect the device to count staffs when Staff Detection is enabled.

- Avoid 940nm light which may result in incorrect counting.
- Outdoor sunlight shining on the over channel will not have any effect, but the mirrored reflections that allow sunlight to shine on the ToF Sensor should be avoided.
- Make sure there are no obstacles within the live view of device. Otherwise, the device imaging may appear abnormally red or it will affect people counting. When the carpet/floor is black, make sure to adjust Noise Filtering Level to max value.

6.4 Installation Ceiling Mount Installation condition: ceiling thickness > 30mm.

Step 1: Take down the side covers.

Step 2: Fix wall plugs into ceiling holes.

Step 3: Remove rubber plugs on the rubber sleeve, connect all required wires.

Note:

- Remove the rubber sleeve if waterproof is not required for easy installation.
- Use round wires.
- Ensure the rubber sleeve and the bottom cover are tightly connected without a gap if waterproof is required; if necessary, wrap the waterproof tapes around the wires to avoid any gap.

Step 4: Fix the device to ceiling with mounting screws.

Step 5: Restore side covers.

Milesight

Ceiling/Lintel Mount (with Optional VB01 Multifunctional Bracket)

Step 1: Fix the pole to the device with the hole on the device.

Step 2: Adjust the length of the pole, then adjust the direction of 3-axis ball and tighten it with the handle. Step 3: Determine the mounting location and drill 3 holes, fix the wall plugs into the mounting holes, then fix the bracket base to the wall plugs via mounting screws.

(**Note:** If the wire needs to be extended to the interior of the ceiling or wall, a wire hole with a suitable size is also required to be drilled.)

Step 4: Remove the cover on the device, and then connect all required wires and pass them through the inside of pole.

(**Note:** if the alarm I/O of VS135-P is going to be used, please connect a multi-interface cable to the device)

Step 5: Fix the pole to bracket base with screws and nuts.

Ceiling Mount

42

Lintel Mount

Milesight

Installation Note:

- Ensure that the ToF sensor is facing down and the tilt angle from the ground is no greater than 15° for the standard version, and no greater than 10° for the high ceiling mount version.
- Avoid direct Infrared LED light in the detection area.
- Not suggested to install the sensor close to glass or mirror.
- Ensure that there are no other objects blocking the ToF light within a 50cm radius of the device's field of view.
- Avoid installing the device against the wall and ensure the distance between the device and the wall as follows:

| Condition | Standard Environment | The carpet/floor is Dark (need to set max noise filtering level) |
|-----------------|----------------------|--|
| Normal imaging | x>50cm, y>60cm | x>50cm, y>75cm |
| Normal counting | x>50cm, y>50cm | x>50cm, y>50cm |

 When you install devices on the top of swinging doors, it is suggested to keep the door normally open. If the door must be normally closed, please install the device on the other side of the door to keep away from the door's movement. And it is suggested to keep away

from the door with a distance of at least 40cm.

6.5 Factors Affecting Accuracy

- Wearing a fisherman's hat or carrying a cardboard box on the shoulder: The target will not be recognized because it will become unlike a human in depth map.
- Handheld or cart-carrying a humanoid doll with sufficient height to pass by: The doll will be mistakenly detected as people because it is human-like in depth map.

7. Communication Protocol

VS135-P will post the people counting data in json format to HTTP URL or MQTT broker.
